

1 ABSTRACT OF THE DISCLOSURE

2 A nail clipping assembly holds a pair of conventional nail
3 clippers in a holder. The holder can also support a light source
4 which is positioned close enough to a subject's finger tip to
5 illuminate the interior of the finger tip. This exposes the
6 intersection between a finger nail which is part of a finger and
7 the exposed nail portion, some or all of which will be cut by the
8 nail clippers.
